

# PEC 3: Peace Agreements

*Lisardo GayÁjn Tremps*

*06/12/2019*

## Contents

<b>1. Introducción</b>	<b>1</b>
<b>2. Análisis descriptivo.</b>	<b>1</b>
2.1. Carga de los datos. . . . .	1
2.2 Análisis descriptivo visual . . . . .	32

## 1. Introducción

Los datos que se analizan en este informe corresponden a los datos de los acuerdos de paz disponibles en <http://www.peaceagreements.org> en especial los que se proporcionan en el fichero [https://www.peaceagreements.org/files/pax\\_all\\_agreements\\_data.csv](https://www.peaceagreements.org/files/pax_all_agreements_data.csv) de la web.

El archivo consta de 1789 registros con 266 variables detalladas en [https://www.peaceagreements.org/files/PA\\_X\\_codebook\\_Version2\\_June\\_2019.pdf](https://www.peaceagreements.org/files/PA_X_codebook_Version2_June_2019.pdf)

## 2. Análisis descriptivo.

### 2.1. Carga de los datos.

Cargo el archivo de datos ‘pax\_all\_agreements\_data.csv’. Una vez cargado el archivo, compruebo el tipo de datos de los mismos.

Primero, inspecciono el tipo de formato .csv que tiene el archivo.

```
# Método alternativo para inspeccionar el archivo.
#fileName <- "rawData.csv"
#conn <- file(fileName, open = "r")
#lines <- readLines(conn)
#head(lines)
#close(conn)
#Inspecciono el archivo
filecheck <- readLines("pax_all_agreements_data.csv")
# Muestro la cabecera
#print(filecheck[0:4])
#head(filecheck,4)
# Muestro la cabecera formateada con kable
kable(head(filecheck), caption = 'Primeras líneas del archivo $pax_all_agreements_data.csv$') %>%
  kable_styling("condensed", full_width = F, position = "left") %>%
  #Para quitar una x que toma por defecto como nombre de columna
  row_spec(0, color = "white")
```

Table 1: Primeras líneas del archivo `pax_all_agreements_data.csv`

x
i»¿Con,Contp,PP,PPName,Reg,AgtId,Agt,Dat,Status,Lgt,N_characters,Agtp,Stage,StageSub,Part,ThrdPart,OthAgr,Loc1
Afghanistan,Government,2,"Afghanistan: 2000s Post-intervention process","Europe and Eurasia",1739,"Agreement between
Afghanistan,Government,2,"Afghanistan: 2000s Post-intervention process","Europe and Eurasia",1923,"Agreement between
Dr. Abdullah Abdullah","The foregoing signatures were witnessed by:
H.E. Jan Kubis, Special Representative of the Secretary General of the United Nations
H.E. James B. Cunningham, Ambassador of the United States of America","Page 3, D. Creation of the position of leader

Se observa como el fichero está separado por comas “,” y el delimitador de decimales es el punto.

Procedo a leer el archivo en un dataframe y muestro las primeras líneas.

```
# Leo el archivo en el dataframe peace
peace <- read.csv("pax_all_agreements_data.csv", sep=",", na.strings = "NA")
# Muestro las primeras líneas formateadas con kable
kable(head(peace)) %>%
  #kable_styling(bootstrap_options = c("striped", "hover",
  #                                     "bordered", "condensed", "responsive"))
  kable_styling("condensed", full_width = F, position = "left")
```

i..Con	Contp	PP	PPName	Reg	AgtId	Agt
Afghanistan	Government	2	Afghanistan: 2000s Post-intervention process	Europe and Eurasia	1739	Agreement
Afghanistan	Government	2	Afghanistan: 2000s Post-intervention process	Europe and Eurasia	1923	Agreement
Afghanistan	Government	2	Afghanistan: 2000s Post-intervention process	Europe and Eurasia	864	Tokyo 1
Afghanistan	Government	2	Afghanistan: 2000s Post-intervention process	Europe and Eurasia	848	Conclus
Afghanistan	Government	2	Afghanistan: 2000s Post-intervention process	Europe and Eurasia	849	Istanbu
Afghanistan	Government	2	Afghanistan: 2000s Post-intervention process	Europe and Eurasia	709	Renewe

Se observa como a partir de la columna “GCh”, todas las columnas se han leído como “integer”, pero debería ser “factor”, al tratarse de una variable categórica binaria. Procedo a corregirlo.

Table 2: Asignación de clase de objeto R a cada variable

variable	clase
Country	factor
Conflict_type	factor
Peace_Process_Number	integer
Peace_Process_name	factor
Region	factor
Agreement_Id	integer
Agreement_Name	factor
Date_Signed	factor
Agreement_Definition_and_Status	factor
Agrmnt_length_pages	integer
Agrmnt_length_characters	integer
Agrmnt_Conflict_Type	factor
Agreement_Stage	factor
Sub_stage	factor
Parties	factor
Third_Party	factor
Other_Agreement	factor
Loc1ISO	factor
Loc2ISO	factor
Loc1GWNO	integer
Loc2GWNO	integer
Uppsala_Conflict_Data_Program_Conflict_ID	factor
Uppsala_Conflict_Data_Program_Peace_Agreement	numeric
Peace_Accord_Matrix_Agrmnt	integer
Correlates_War	integer
GCh	integer
GChRhet	integer
GChAntid	integer
GChSubs	integer
GChOth	integer
GDis	integer
GDisRhet	integer
GDisAntid	integer
GDisSubs	integer
GDisOth	integer
GAge	integer
GAgeRhet	integer
GAgeAntid	integer
GAgeSubs	integer
GAgeOth	integer
GMig	integer
GMigRhet	integer
GMigAntid	integer
GMigSubs	integer
GMigOth	integer
GRa	integer
GRaRhet	integer
GRaAntid	integer
GRaSubs	integer
GRaOth	integer
GRe	integer
GReRhet	integer
GReAntid	integer
GReSubs	integer
GReOth	integer
GInd	integer

```
# Hallo el número de columna de la variable GCh
which(colnames(peace)=="GCh")
```

```
## [1] 26
```

```
# Corrijo los tipos de las variable de peace desde la columna 26
```

```
for (i in 26:ncol(peace)) {
  if (class(peace[,i]) == "integer") {
    peace[,i]<- as.factor(peace[,i])
  }
}
str(peace, list.len=ncol(peace))
```

```

Vuelvo a mostrar la tabla con los objetos de R corregidos

```
# Muestro el tipo de cada variable formateado con kable
vartypes <- data.table(variable = colnames(peace), clase = sapply(peace, class))
kable(vartypes, caption = "Asignación de clase de objeto R a cada variable") %>%
  kable_styling("striped", full_width = T)
```

Compruebo que no hay valores nulos.

```
# Busco primero qué variables tienen valores perdidos
sapply(peace, function(x) sum(is.na(x)))
```

```

## 2.2 Análisis descriptivo visual

Represento gráficamente las variables del conjunto de datos para poder visualizar la distribución de valores de las variables.

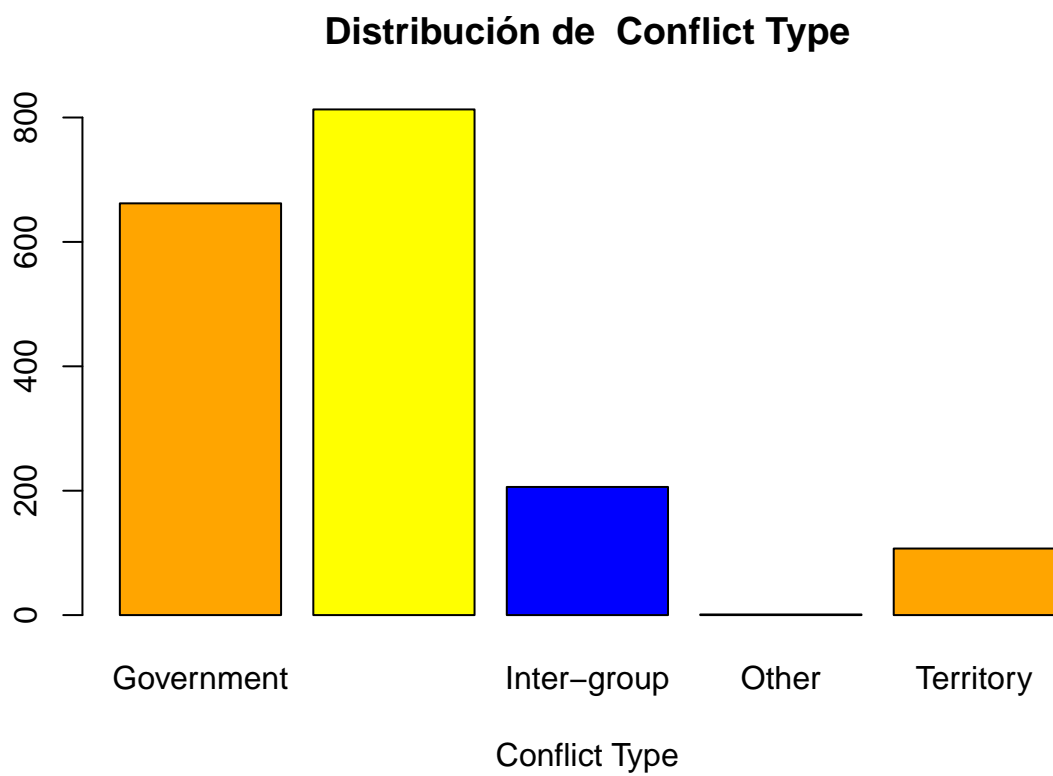

Para las variables categóricas o cualitativas elijo un boxplot, para las cuantitativas un histograma.

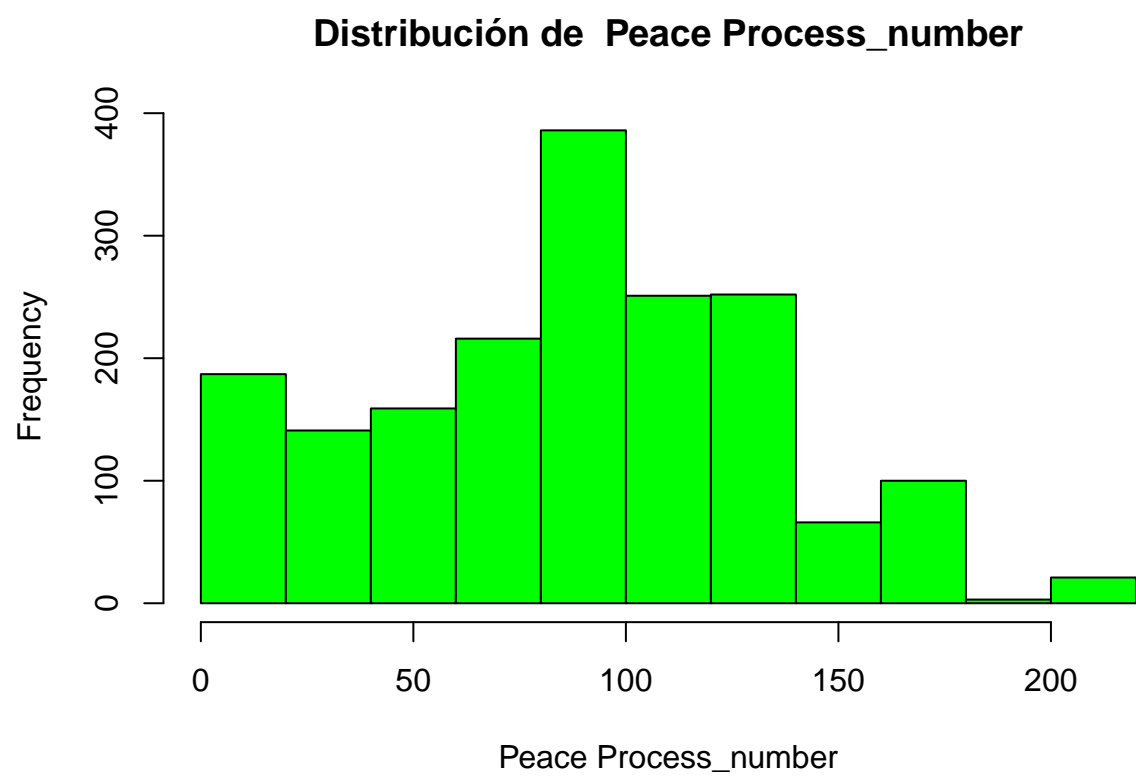

```
# Muestro un histograma para cada variable cuantitativa o un gráfico de barras en caso de que
# sea una variable cualitativa.
for (i in 1:ncol(peace)) {
  if (class(peace[,i]) != "factor") {
    hist(peace[,i], freq = TRUE, col = c("green"),
        main=paste("Distribución de ",
                    str_to_title(str_replace(colnames(peace[i]), "_", " ")), sep = " "),
        xlab= str_to_title(str_replace(colnames(peace[i]), "_", " ")))
  }
  else {
    barplot(table(peace[,i]),
        col = c("orange","yellow","blue","red"),
        main=paste("Distribución de ",
                    str_to_title(str_replace(colnames(peace[i]), "_", " ")), sep = " "),
        xlab= str_to_title(str_replace(colnames(peace[i]), "_", " ")))
  }
}
```

## Distribución de Country

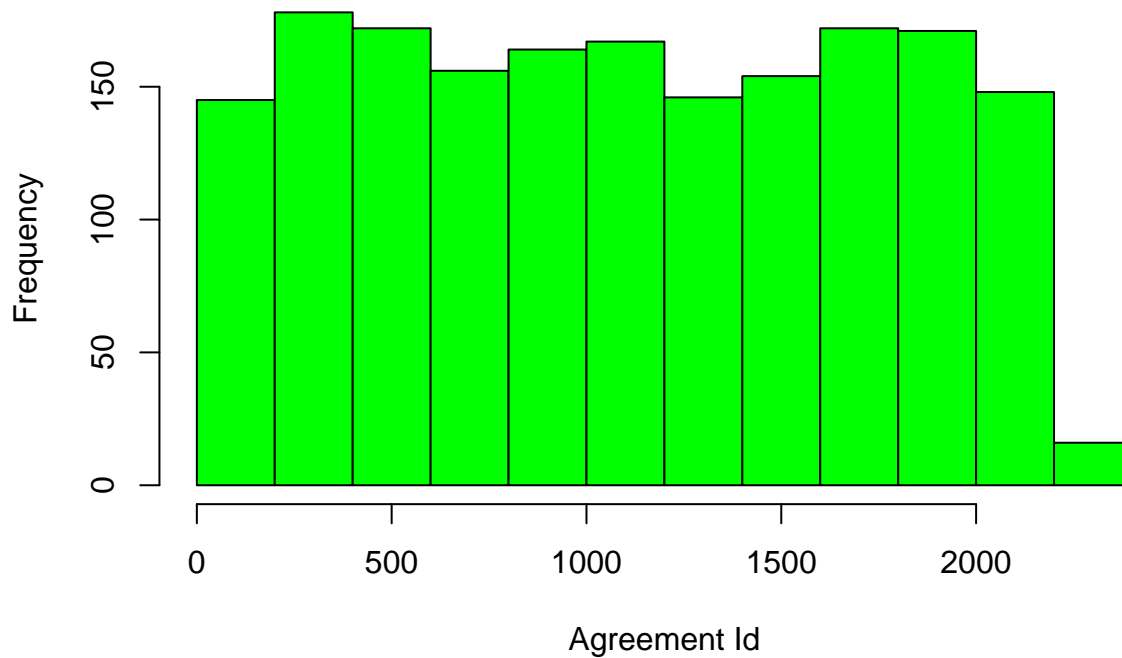

### Distribución de Peace Process Name

Distribución de Region

## Distribución de Agreement Id

```
## Warning in axis(if (horiz) 2 else 1, at = at.l, labels = names.arg, lty =
## axis.lty, : font width unknown for character 0x9d
```

```
## Warning in axis(if (horiz) 2 else 1, at = at.l, labels = names.arg, lty =
## axis.lty, : font width unknown for character 0x4
